

NAME

StripForwHeader – Click element; strips outermost Forwarding Header

SYNOPSIS

StripForwHeader

Ports: 1 input, 1 output

Processing: agnostic

Package: local (core)

DESCRIPTION

Strips the outermost Forwarding Header.

Note that **StripForwHeader** assumes that the Forwarding Header starts at the beginning of the packet, hence you need to use StripIPHeader and Strip(8) before processing packets iwth **StripForwHeader**. Also note that **StripForwHeader** will set the network and transport header annotation, assuming that an IP header is following.

SEE ALSO
